RF Tracking Debuts PressurePro™ PULSE TPMS in UK

First release in PressurePro's TPMS+ Platform adding safety and savings for European Market

Harrisonville, MO: April 27, 2016: Advantage PressurePro™ LLC, world leaders in Tire Performance Management Solutions technologies and Concirrus, the leading Internet of Things solutions partner have teamed with RF Tracking to bring the PressurePro PULSE tire performance management solution to the UK. The company is currently showing the system at the CV Show in Birmingham.

The PressurePro Pulse sensors monitor tire pressure constantly, regardless of whether the vehicle is parked or on the move, and the system provides alerts when pressure is too low or too high. RF Tracking adds that in addition to offering real time tire pressure monitoring, PressurePro Pulse features “several never before seen technology options” that give users “unmatched features and ease of use.”

The new in-cab Pulse display provides an easy to read screen, with quick glance alerts and fully adjustable vehicle layouts and screen views. Alert prioritization and fully adjustable alert levels give users the ability to tailor design their monitoring to fit their needs and usage. With the capability to monitor up to 80 tires at once and store up to five pre-programmed units, Pulse allows users to monitor any type of vehicle or easily switch the display between vehicles for added freedom. With CANBUS and RS232 connectivity, built in data logging and microSD card storage, Pulse brings new levels of integration and data collection abilities.

“PressurePro Pulse really is a big step forward in live tire performance monitoring, and will allow vehicle operators to take full advantage of the next generation of TPMS,” says RF Tracking managing director Steve Cowper. “With advanced features such as the ability to monitor tires of different trailers, and remote monitoring through RF and telematics integration, PULSE promises to add significant savings, efficiencies and safety to fleet management.”

As part of a range of hi-tech fleet management, security and safety solutions, RF Tracking will be launched a new long range RF Tracker and Tough Tracker, a virtually indestructible satellite tracking device for the protection of assets. These devices, together with PressurePro Pulse and the full range on RF Tracking's tags, are on display today and tomorrow at RF Tracking's CV Show stand, 3F119.

About Advantage PressurePro™, LLC: Advantage PressurePro is the developer and marketer of the PressurePro line of Tire Pressure Monitoring Solutions. The leading aftermarket TPMS system worldwide, PressurePro has been involved in the industry since 1991 and is renowned as the pioneer in the TPMS market. With a reputation for reliability, durability, accuracy and ease of use of their solutions, PressurePro remains the only TPMS manufacturer that provides American Made product. The only TPMS provider to offer numerous advanced monitoring options, PressurePro was the first TPMS Company to add communications capabilities across their product line, bringing to life remote monitoring options alongside of the world's leading Telematics products. PressurePro also remains the only TPMS provider to offer fully automated drop-and-hook applications and data logging abilities. Trusted by customers worldwide, PressurePro remains committed to providing savings and safety for drivers worldwide. For further information visit PressurePro online at www.pressurepro.us.
