## **PressurePro™ Launches ‘Fleet TPMS’, a Powerful Tire Performance Management App** **Utilizing PressurePro’s FX, Fleet TPMS unlocks comprehensive tire performance data, as well as access to PressurePro’s Connect platform.**

**Harrisonville, MO | November 21, 2019:** Advantage PressurePro, LLC, world leaders in Tire Performance Management Solutions, announced today the release of their Fleet TPMS app; unlocking a powerful, comprehensive and cost-efficient tire performance management tool for fleets. Leveraging PressurePro’s FX technology, and building upon their previously released and feature-rich consumer app, the launch of Fleet TPMS empowers fleet users to deliver real time tire performance monitoring for drivers and haulers of many types direct to existing smart devices. Additionally, the launch of Fleet TPMS also enables a critical link for fleets to PressurePro’s Connect tire management platform, unleashing unmatched visibility and control of your tire management practices.

Featuring 24/7 tire monitoring, five unique pressure/temperature alerts and local notifications for maximized coverage and safety, Fleet TPMS also touts fully configurable layouts and vehicle naming and storage, enabling complete customization and easy toggling between multiple trailers/units. Further, a rolling performance history log enables users to gain immediate access to recent tire performance data.

“While a powerful monitoring tool on its own, Fleet TPMS becomes even stronger when used as a link to provide data flow through our comprehensive software platform Connect,” stated Edward Lutsko, PressurePro’s Director of Technology. “When combined, customers unlock advanced monitoring tools to gain detailed and actionable tire performance insights across their entire fleet, giving them unmatched control of their tire management practices.”

When paired with PressurePro Connect, users also unlock email alerting capabilities, exportable tire performance history, automated tire performance trend analysis, and an easy to use dashboard that features prioritized data and actionable items.

“As we have for the last 28 years, PressurePro continues to push the innovation of our market to provide maximized safety and savings for to every road our customers travel,” stated Jason Zaroor, PressurePro’s President and CEO. “With the release of Fleet TPMS, and especially when paired with our Connect platform, we’re now able to provide a cost effective solution that provides complete visibility of ever tire in your fleet; in-cab to drivers, in the field to managers or to your office for controllers.”

Being released on November 21<sup>st</sup>, PressurePro continues to honor the legacy of their Founder, and the original pioneer of TPMS, Phillip Zaroor. Today, he would have turned 71.

**About Advantage PressurePro™, LLC:** World leaders in Tire Performance Management, PressurePro has armed users with the market’s most trusted and advanced TPM Solutions since 1991. A global company whose roots remain firm in their family owned business values, PressurePro remains driven to add safety and savings to every road you travel. Noted pioneers of their industry, PressurePro continues the innovation of their comprehensive line of offerings, providing users with the real time tire performance data needed to save fuel, extend tire life, decrease maintenance, reduce downtime, improve compliance and more.
